Exit and Entrance Travel Lane and Shoulder Width Design Criteria:

## 12-4.02 Cross Section

Figure $12-4 \mathrm{~B}$ presents the typical cross section for ramps. The following will also apply to the ramp cross section:

1. Width. The minimum paved width of a one-way, one-lane ramp will be 26 ft . For pavement marking purposes, this will normally be distributed as $4 \mathrm{ft}-12 \mathrm{ft}-10 \mathrm{ft}$ (i.e., 4 ft left shoulder, $12-\mathrm{ft}$ traveled way, $10-\mathrm{ft}$ right shoulder when viewed in the direction of travel). This arrangement is illustrated on Figures 12-3C and 12-3F for exit and entrance ramp designs.

The minimum width of a one-way, two-lane ramp will be 38 ft . This width yields two 12-f ramp lanes, a 4 -ft left shoulder and an 10 -ft right shoulder.

Notes:
All distances are measured from the edge of traveled way. See Section 13-2.02, Comment \#5.
2. See Section 13-2.02, Comment \#2, for application of clear zone criteria on fill slopes.
3. See Figure 5H for illustration of a cut section with a positive shelf. See Section 13-2.02, Comment \#3, on cut slopes and ditch sections.
4. The values in the table apply to all facilities both urban and rural. See Section 13-2.02, Comment \#4, for utility poles in urban areas.

Notes:

1. The deceleration lengths are calculated from the distance needed for a passenger car to decelerate from the average running speed of the highway mainline to the average running speed of the first governing geometric control.
2. These values are for grades less than 3\%. See Figure 12-3B for steeper upgrades or downgrades.

Notes:

1. The acceleration lengths are calculated from the distance needed for a passenger car to accelerate from the average running speed of the entrance curve to a speed of 5 mph below the average running speed on the mainline.
2. These values are for grades less than 3\%. See Figure 12-3E for steeper upgrades or downgrades.
3. Use the value of $L$ or 300 ft beyond the 2-ft nose, whichever is greater.

## I-84 Controlling Design Criteria

Interstate 84 from Exit 3 through Exit 8 has a functional classification of an Urban Interstate Principal Arterial (Urban Freeway) and will be evaluated by the criteria for major reconstruction. All controlling design criteria are taken from Figure 5A of the Connecticut Department of Transportation Highway Design Manual (HDM) 2003 Edition (Including Revisions to February 2013) and AASHTO's A Policy on Geometric Design of Highways and Streets (Greenbook) $20116^{\text {th }}$ Edition. Controlling criteria determined from Section 6-6.02 of the HDM.

## I-84 Eastbound \& Westbound Controlling Design Criteria

| Controlling Design Criteria |  | Required Values |
| :---: | :---: | :---: |
| Functional Classification |  | Urban Interstate Principal Arterial (Urban Freeway) |
| 1. | Design Speed | Suburban/Intermediate: $65 \mathrm{mph}-70 \mathrm{mph}$ Built-up: $50 \mathrm{mph}-55 \mathrm{mph}$ |
| 2. | Travel Lane Width | 12' |

## US Route 7 Controlling Design Criteria

Route 7 has a functional classification of an Urban Expressway Principal Arterial (Multi-Lane Principal Urban Arterial) and will be evaluated by the criteria for major reconstruction. All controlling design criteria are taken from Figure 5A of the Connecticut Department of Transportation Highway Design Manual (HDM) 2003 Edition (Including Revisions to February 2013) and AASHTO's A Policy on Geometric Design of Highways and Streets (Greenbook) $20116^{\text {th }}$ Edition. Controlling criteria determined from Section 6-6.02 of the HDM.

| Controlling Design Criteria |  | Required Values |
| :---: | :---: | :---: |
| Functional Classification |  | Urban Expressway Principal Arterial (Urban Freeway) |
| 1. | Design Speed | Suburban/Intermediate: $65 \mathrm{mph}-70 \mathrm{mph}$ Built-up: $50 \mathrm{mph}-55 \mathrm{mph}$ |

## Entrance and Exit Ramp Controlling Design Criteria

Entrance and exit ramp design elements are taken from Section 12-3.03 of the HDM. Other design elements were taken from Sections 12-1.01.01, 12-2.04 and 12-4.01 of the HDM
Critical Ramp Design Criteria

| Design Criteria |  | Required Values |
| :---: | :--- | :--- |
| 1. | Minimum Length of Deceleration for an Exit <br> Ramp | See Figure 12-3A of the Highway Design Manual |
| 2. | Deflection (Taper) Angle for a Taper Exit <br> Ramp | 2 to 5 degrees |
| 3. | Minimum Length of Acceleration for an <br> Entrance Ramp | See Figure 12-3D of the Highway Design Manual |
| 4. | Parallel Portion of the Acceleration Lane for <br> an Entrance Ramp | $300^{\prime}$ |

| Design Criteria |  | Required Values |
| :---: | :--- | :--- |
| 1. | Terminal Side of Freeway | Right |
| 2. | Interchange Spacing | 1 mile |
| 3. | Ramp Design Speed | At Least Half of Mainline Design Speed |
| 4. | Capacity | Adequacy |

(1) Required desig speed based on Freeway Area Type. See Design Speed section for each segments's freeway area classification.
(2) Curve 6 and $C$ Curve 7 are part of a compund curve. Per section $8-2.20 .03$ of the $H O M$, when compound curves are used on mianine, the radius of the flatter circular arc (R1) should not be more than $50 \%$ greater than that of the sharper arc ( $(22$ ) ( $R 1 \leq 1.5 \mathrm{R} 2$ ). The radius of the flatter circular arc (Curve 7 ) is 2.38 times greater than the sharper arc (Curve 6 ).
